NetSecArchQuiz   Score: _____

1. **The main characteristics of SDN generally considered for improving network security are**

   A Open interfaces and built-in AAA

   B Programmability and logically centralized control

   C Programmability and logically distributed control

   D Built-in AAA and 3rd party applications

2. **The main aspects of the SDN architecture that introduce security vulnerabilities are:**

   _____

   _____

   _____

3. **Tampering of data stores can be mitigated by not storing secrets.**

   A True

   B False

4. **What are the four levels at which security protocol elements are required?**

   A Node, Layer, System, Architecture

   B Application, Host, Sub-network, Link

   C Application, End System, Sub-network, Link

   D Physical, Data link, Network, Application

5. **List two benefits of integrating security services into lower network layers.**

   _____

   _____

   _____
